

Introduction to Computer Studies, Grade 10 – Open ICS 200

Do you want to start to learn how to program computers? If so, this is the course for you.

In the Grade 10 Introduction to Computer Studies course, students will learn the skills needed to create simple computer programs. Programming concepts are introduced to students using Alice. Alice is an educational programming tool designed to help students learn to write programs. Once programming concepts have been developed using Alice, students will get an opportunity to program using Python, a fully developed programming language.

In addition to learning how to program, student will also have an opportunity to explore what's inside a computer and how computers work.

Prerequisite: None
