

Science, Grade 10 – Academic (ESL)
SNC 2DL

This course is only available for ESL students.

This course enables students to enhance their understanding of basic concepts in biology, chemistry, earth and space science, and physics; to further develop their scientific investigation skills; and to relate science to technology, society, and the environment. Students will design and conduct investigations and develop their understanding of scientific theories related to cells and organ systems in animals and plants; chemical reactions; forces affecting climate and climate change; and the interaction of light and matter.

Prerequisite: Science, Grade 9, Applied (SNC 1PL)
